# **It all started with a single touch. A touch to people's lives, to their living spaces...**

Every place we spend time in deserves touches full of life. This is why we breathe life to bathrooms through sinks and bathroom furniture created with a human touch from design to production.

Since 2014, we have been transferring the deep-rooted experience of Çivil Mobilya dating back 1951 to bathrooms. With our sinks and bathroom furniture designed and manufactured incorporating not only our know-how and experience, but our innovative approach as well, bringing a rising trend to your homes.

We combine modern designing skills with high quality and healthy materials, and we utilize technology as well as precision of craftsmanship in our manufacturing technique. With Akrivit sinks and bathroom furniture, we offer practical and stylish solutions for bathrooms in crowded spaces such as hotels and restaurants as well as private residences.

## **From initial design to final touch, handmade quality and care...**

We offer different designs for different lifestyles. We give utmost importance to functionality and ease of use in every design as much as style and aesthetics. Our sinks and bathroom furniture commence their journey with designing to combine function and aesthetics. Through casting, cutting, coating, sanding and painting phases, the whole process from initial to final touch is supported by new generation of manufacturing technologies and handmade production at every stage...

That's why each of our products are as special, elaborate and high quality as handcrafted...

# AKRIVIT

## **Akrivit, is the first and only manufacturer in Turkey to produce solid surface sinks and furniture together.**

**All bathroom furniture is produced in our manufacturing facilities.**

Acrylic solid surface washbasins are lighter than other types of sinks thanks to the nature of the materials used in production. Thus, it provides advantages in storage, transportation and installation. It is resistant to impacts and scratches.

Metal casting and plastic sinks do not produce a homogeneous surface due to their manufacturing technologies; as the size of ceramic sinks increases, it is almost impossible to obtain a smooth surface due to coating problems, therefore they have a nonhomogeneous surface like an orange peel type.

Acrylic solid surface washbasins offer a certain homogeneity and 100% smooth surface when compared with the other sinks regardless of size. Acrylic sinks are more hygienic than the other types of the sinks thanks to the nature of the materials used in production. It does not contain bacteria and microbes as it is produced by anti-bacterial materials. Metal casting, plastic, ceramic and stainless steel sinks all wear out during their lifetime. Intensively used sections are scratched. It is not possible to remove these fractures and scratches.

Acrylic sinks are suitable for the repair of scratches and fractures. This is the reason they can stay brand new
